

This is the left column on page 1.

It has multiple lines.

We want to test that the XY-cut algorithm
reads the left column fully before moving to the right.

Numbered list:

1. First item
2. Second item
 - a. Sub-item
 - b. Another sub-item
3. Third item

This is the right column on page 1.

It also has multiple lines.

And a warning:

WARNING: This is a warning.

Note: This is a note.

Footnote-like text (smaller font size will be set via

This is page 2 of the test document.
It has simple single-column content.
We want to verify that multi-page processing works correctly.
The XY-cut algorithm should process each page independently.
Then the results should be concatenated in page order.
So all content from page 1 should appear before any content from page 2.

Section 1: Introduction

This is the first section on page 2.

Section 2: Details

This is the second section on page 2.
It contains more detailed information.

Conclusion

This concludes the test document.
